Understanding the problems

Whether you are a fresher or a senior, you'll agree that making a project is quite a tedious task. No matter how great idea you have, till the time you don't have a proper network you won't be able to build a team to execute it efficiently. Communicating with others is one of the most important skills required to build a proper team for your project to be successful. Unfortunately many people due to their lack of networking skills hit a blockade at this stage itself and are not even able to try their idea.

For Demo of the website you can visit:

Project objective

The objective of our project is to provide a platform to all the students where they can present their ideas for projects and form teams according to their requirements. No matter if students know each other or not, anyone can apply for any project without any restrictions. This way the project manager can easily form his ideal team as per his/her requirements.

Target audience

Our target audience for this project are all the students in VIT Vellore. This application will help students to take part in any project they like or find interesting and can make their own team.

This application will bring students with similar interests and thinking together to work on various ideas and learn from each other.

Sign Up

Sign up for the app using your credentials

Share

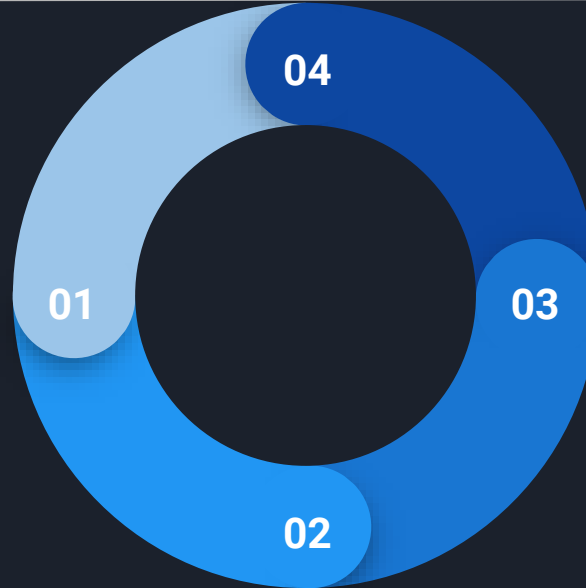

Share and present your ideas for projects

Form Team

Form your ideal team according to your requirements.

Apply

Apply for the projects that interest you.

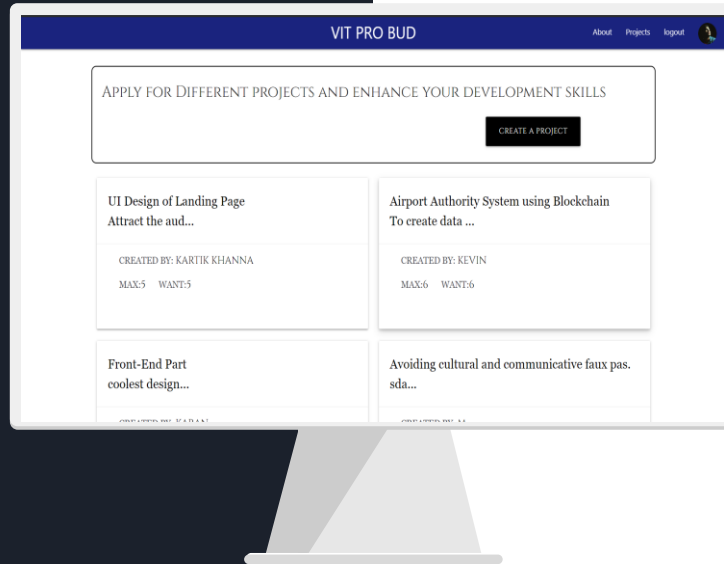

Introducing: VIT PRO BUD

Initially students create their profile by signing up for the application. After that they can either create their own projects or apply in others projects. When someone applies for a project, the project manager of that project can see the profile of the applicant and if he/she has the desired skills they are accepted in team else their request is declined.

Students can create as many projects as they like and can also apply for as many projects as they want to.

The project manager will receive a list of all the applicants and he/she can see their profiles. According to skills required for the project they can choose whom to accept in team and whom to reject.

Thank you!

Our project will help many students who have ideas for projects but are not able to execute them due to lack of a proper team.
